

Courtroom Recording

Digital recording and transcription of court proceedings

We Understand Court Recording and Transcription

AudioSoft is a leading global supplier of dedicated recording, playback and transcription solutions for courts with full integration of workflow management, scheduling, and third-party case management systems. Improve your efficiency today with our complete courtroom solutions.

With over fifteen years' experience, AudioSoft's mission is to provide best-in-class, cost-effective solutions for demanding requirements.

Flexible and Scalable Recording Solutions

AudioSoft's court recording solutions are based around our fully developed and proven AudioPC family of products. Over 30,000 recording channels with over 400 million operational recording hours in over 30 countries around the globe is testimony to AudioSoft's superior and sophisticated yet user-friendly products. They may be scaled from notebook-based solutions for mobile courts to high-volume courts, local hearings, and lengthy jury trials, providing audio and CCTV recording for storage, playback, and transcription as required.

Using AudioPC, up to 8 channels of audio and 4 channels of video are recorded using a secure evidentially admissible file format. Conversion to other formats such as audio CD, MPEG4 or WAV is simple and quick.

Sophisticated Transcription

AudioSoft's unique transcription tool, AudioWord speeds up transcription by allowing audio transcribers with conventional foot controls to playback control within Microsoft Word. Alternatively, Medirva™ provides automated speech-to-text transcription in an uncontrolled multi-speaker environment in addition to word spotting.

Benefits:

- ▶ Robust and reliable – Proven since 1993
- ▶ Intuitive and easy to use
- ▶ Scalable – Distributed or centralized recording
- ▶ Integrated workflow management
- ▶ Annotate with LegalWizard
- ▶ Transcribe with AudioWord or Medirva™

Courtroom Recording

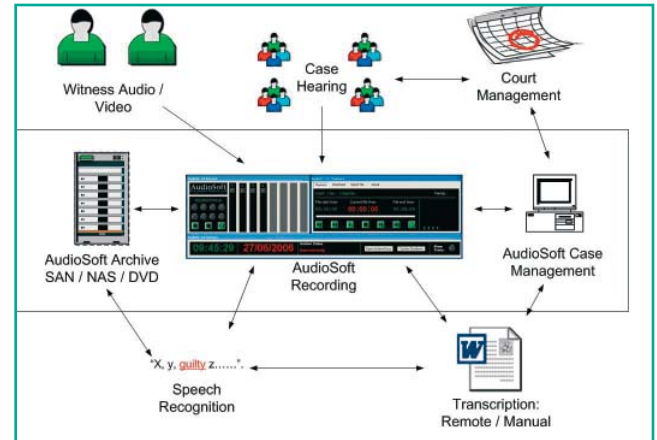

Digital recording and transcription of court proceedings

Record

AudioPC-CR provides a simple, but flexible solution for computer based digital recording and playback of courtroom proceedings. The solution can be readily scaled from notebook-based solutions for mobile courts to high volume courts, local hearings and lengthy jury trials. AudioPC-CR provides audio and CCTV recording for storage, playback and transcription as required.

In close co-operation with the relevant authorities, special design consideration has been given to resilience and security with various levels of system redundancy, secure algorithms to guarantee data integrity, administration of user access rights and audit trails to give a tamperproof record of access.

AudioPC-CR's software architecture and user interface have been designed in conjunction with the courtroom authorities to ensure both the legal admissibility of the recordings and ease of operational use. The recorded data can be stored locally on fault tolerant RAID solutions and/or stored centrally on network-attached storage (NAS) devices or any logical drive such as a USB external disk. Alternatively, at the end of the day's proceedings, selected data can be copied to a local CD or DVD drive in native or industry standard formats such as .WAV or .MPEG4. AudioSoft's mission-critical heartbeat health monitoring technology, alarming and built-in test facilities allow AudioPC to be left unmanned with alarms delivered automatically to the designated supervisor/maintenance personnel.

Analyze

AudioSoft's unique transcription tool, AudioWord, speeds up transcription by allowing audio transcribers with conventional foot pedals to control playback of recorded data within Microsoft Word. Alternatively, our Medirva™ product provides workflow management of transcription resource and automated speaker-independent transcription with optional contextual search, thereby greatly enhancing the efficiency of the transcription process. The use of best-in-class audio analytics ensures that valuable resources can be used efficiently resulting in significantly improved operational capability.

Visualize

To ensure it is possible to verify who was speaking, AudioSoft's Player replays all recorded content including speech with lip synchronized video together with the court reporter's annotations.

Through optimization of recording, analysis and visualization, AudioSoft provides solutions that deliver dramatic returns on investment and significantly improved operational performance.

AudioSoft Product Range

- ▶ Audio Recording: AudioPC-CR-A - Records 1 to 8 channels per module, scalable to 1000s of channels via additional modules.
- ▶ Audio & Video Recording: AudioPC-CR-AV - Records 8 channels of audio and 4 channels of video.
- ▶ Court Reporting: LegalWizard - Hyperlinked notes utility.
- ▶ Manual Transcription: AudioWord - Control voice recordings via a tool bar set within Microsoft Word for simplified transcription.
- ▶ Automated Transcription: Medirva™ - Automated speaker-independent transcription. No speaker training required.
- ▶ Portable Variant: Operates on standard notebook PC.
